# METRON MD

Podiatry Imaging Software  
Support Services

*We are here to support you with your Metron-MD product, providing quick and easy installation and training, backed by continuous service.*

*Metron Support Services helps you get the most out of the Metron-MD investment. We go beyond the usual "support" service, by helping you to continually improve your product skills and see benefits you will gain from Metron-MD.*

## How you benefit all year!

*Your annual support agreement includes:*

### PRODUCT INSTALLATION AND SETUP

- ◆ Instructions for initial setup and installation of the Metron-MD imaging software
- ◆ All software enhancements as they become available<sup>1</sup>
- ◆ Software help with reloads on new and existing computers

### REMOTE PRODUCT TRAINING

- ◆ Initial training by a product specialist
- ◆ Access to online training programs—great for anyone new to the software

### ONGOING PRODUCT SUPPORT<sup>2</sup>

- ◆ Version upgrades and related improvements
- ◆ Custom technique charts and image quality assistance
- ◆ Best Practice examples shared by other Metron users
- ◆ Phone and email support (8:00am-6:00pm CST M-F)

## METRON DESKTOP PC OR LAPTOP REQUIREMENTS

- ◆ Operating System: Windows XP Pro 32-bit, Windows 7 or Windows 8. Make sure the acquisition device supports the specific operating system; some of the older devices. Older X-Ray devices are like printers – many older printers will not work on new computers with Windows 7 or Windows 8.
- ◆ Graphics System and Monitor/Desktop PC: Widescreen 20+” monitor with a minimum resolution of 1600 x 1200 or greater / 60 Hz, image contrast ratio – 800:1 (the higher the better), and response time of 8 ms or better plus an independent graphics card with 512MB is strongly recommended for best image presentation quality.
- ◆ Graphics System and Monitor/Laptop PC: Laptop should have a 17 inch screen for best display of X-Rays. Display resolution of 1600x900 or greater with High Definition Anti-Glare display strongly recommended.
- ◆ RAM: Computers running Windows XP Pro will perform best with at least 2GB of RAM. Computers running Windows 7 or newer operating system will perform best with at least 4GB of RAM.
- ◆ Disk Space: To install Metron and have needed space for the images, the desktop PC or laptop must have at least 200GB of available disk space. Consider 350GB-1TB disk. Also consider the new Solid State Drive (SSD) for laptops used in mobile laboratory application. They are more tolerant of rough use.
- ◆ Processor Speed: Metron will typically perform better on newer/faster desktop PC or laptop. To maximize the speed/efficiency of the Metron program, and your overall image processing/viewing experience, use the fastest desktop PC or laptop possible.
- ◆ Internet Connection: High speed internet connection availability is required on any computer that will be running Metron. The internet connection is critical for training and support. New software releases are also provided automatically via internet. Also, with Metron, you can send diagnostic images electronically to a remote radiologist; this is not possible without an Internet connection.

<sup>1</sup>Metron-MD software enhancements are only available to those clients that have an active support agreement.

<sup>2</sup>Product support under the support agreement refers to the Metron-MD software only. It does not include support for your computer hardware or network system. Support for hardware and network systems is available separately from Metron Support Services
